LINEAR INTEGRATED CIRCUIT

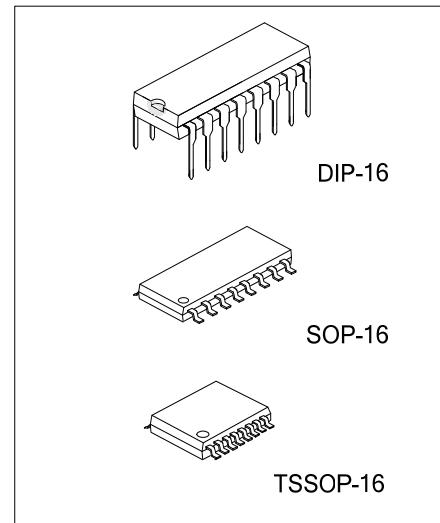

VOLTAGE MODE PWM
CONTROL CIRCUIT

■ DESCRIPTION

The UTC **TL494-Q** incorporates all the functions required in the construction of a pulse-width modulation switching circuit. Designed primarily for switching power supply control or DC-DC converters, it offers the systems engineer the flexibility to tailor control circuitry to its own application.

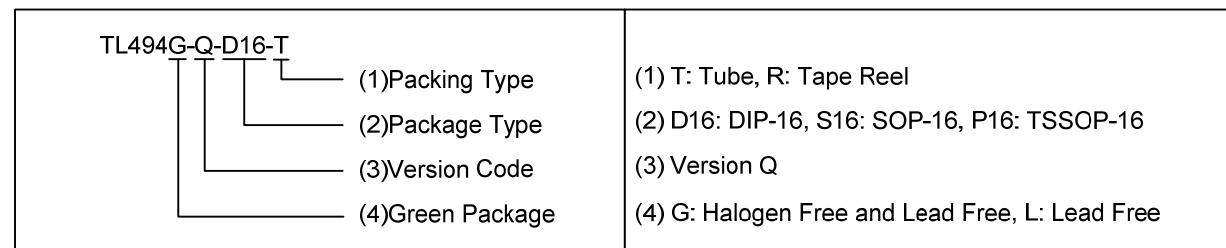

■ FEATURES

- * Complete PWM power control circuitry
- * Uncommitted outputs for 200mA sink or source current
- * Output control selects single ended or push pull operation
- * Internal circuitry prohibits double pulses over total range
- * Easy synchronization
